CGREBOP	BOP	240x140x1150	RE031BOP - RE042BOP - RE052BOP - RE062BOP

Material: Technopolymer

Use: Item that allows the connection between the gutter line of the slope and the gutter channel below. The gutter flashing is composed of a smooth part (which enters the gutter channel allowing the water to flow out) and a wavy part that has the same pitch as the sheet.
To avoid infiltrations, it is important to position this accessory under the sheet during installation.
