CLETGC	GOP	430x105x1110	ET021GOP - ET031GOP - ET042GOP - ET052GOP - ET062GOP
CLETRT	RT	430x105x1110	ET021ROP - ET031ROP - ET042ROP - ET052ROP - ET062ROP

Material: Technopolymer

Features: Made up of two overlapping half-ridges composed of a linear part (which maintains the pitch of the sheet) and a smooth semi-circular element that allows the overlapping and sloping with an angle between 90°-170°. The hinged ridge allows the continuity of coverage between slopes that might not be aligned.

Use: Essential for connecting the intersection points of the horizontal roof planes, thus making the roof continuous also in terms of water tightness.
